

# CloakRFQ Receipts

Private invoice financing where every party sees only its slice of the deal.

For suppliers who need cash before their invoices come due, and the funders who compete to provide it.

## THE PROBLEM

# To get a quote, you overshare

01

Sellers broadcast confidential debtor files to every funder they ask.

02

Funders can see who else is bidding, and often the competing bids.

03

Platforms and brokers in the middle see everything, by default.

Price competition and privacy pull against each other, and on a shared ledger, oversharing is the path of least resistance.

## THE IDEA

# A blind RFQ, scoped per party

**SELLER** Publishes a **Blind RFQ**: attestations and economics, not raw debtor files.

**FUNDERS** Submit **Private Quotes** only the seller can read, never each other.

**EVERYONE** Compliance, risk, coordinator and auditor each get their **own scoped view**.

Same RFQ, a different authorized view for every party, backed by **Canton** party permissions.

# Selective disclosure: who sees what

| PARTY               | SEES                                                             | WITHHELD                                                         |
|---------------------|------------------------------------------------------------------|------------------------------------------------------------------|
| Seller              | ✓ Receivable, full Seller Quote View, selection & settlement     | 🔒 Funder balances & funding sources; identities pre-settlement   |
| Funder              | ✓ Own RFQ Disclosure Package, own Private Quote & outcome        | 🔒 Competing quotes; other funders; the Quote Book                |
| Compliance          | ✓ Eligibility data, its attestations, Proof-of-Funds Gate status | 🔒 Quote prices & commercial terms; raw underwriting              |
| Risk Assessor       | ✓ Debtor & receivable risk data needed to attest                 | 🔒 Prices & terms; eligibility decisions; out-of-scope identities |
| Coordinator         | ✓ Workflow status, deadlines, party routing                      | 🔒 Private Quote contents, prices & terms                         |
| Auditor / Regulator | ✓ Scoped Compliance Receipt: statuses, references, outcome       | 🔒 Full RFQ, Quote Book, raw evidence, unselected funders         |
| Outsider            | ✓ Opaque archived contracts only                                 | 🔒 Everything substantive: what, who, how much                    |

THE ORIGINAL IDEA

# Disclosure is part of the quote

Four Private Quotes on a \$480,000 receivable. The highest Net Purchase Price doesn't win:

BEST COMPLIANT

LC-3 · Lumen Capital

**\$465,200**

85% advance · Non-recourse

Discloses: attestations only

Lowest headline · PoF passed

HF-9 · Harbour

**\$466,800**

88% advance · Negotiable recourse

Discloses: debtor identity

PoF passed

VC-7 · Vanta Credit

**\$468,000**

90% advance · Recourse

Discloses: identity + payment history

PoF passed

OX-2 · Onyx

~~**\$470,000**~~

92% advance · Recourse

Discloses: full file + audited accounts

Highest headline · excluded at PoF Gate

Recourse, settlement timing, debtor notification and required disclosure are priced into every quote, so the top sticker price loses to a compliant one.

# How the RFQ moves between parties

Quotes are binding within their validity window; the fallback queue is seller-controlled, ordered by selection criteria, never auto-sorted by headline price.

# No operator sees the whole book

- A public ledger exposes every quote; a private marketplace means trusting an **operator who sees everything**.
- **Canton** gives each party its own ledger view, so competitors and counterparties transact with no all-seeing middleman.
- Disclosure is a **ledger permission**, so the compliance trail is real and selective, not reconstructed by a platform.

## WHAT THIS DEMO IS, AND ISN'T

On-Ledger **Demo Settlement Asset**, non-production.

Proof-of-Funds is **bid-eligibility evidence**, not a funds lock or escrow.

No production custody, payments, or legal assignment.
